

My First Project

Spark Game

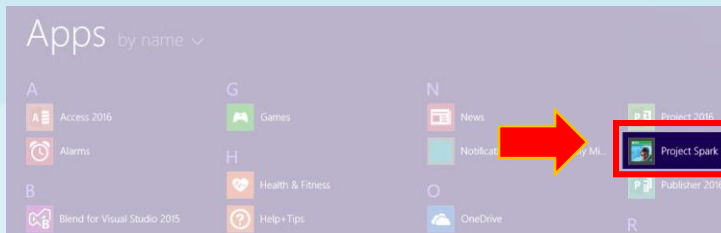

Make a Main Character

Card 7 of 7

I am learning: **Project Spark Game Programming**

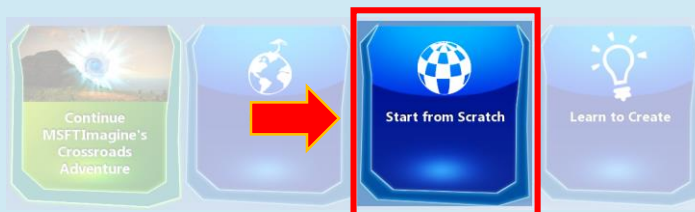

1. Click on the **Project Spark** icon in the Windows apps area to start Project Spark on a Windows PC.

2. Click on **Create** once you get to the main menu.

3. Click on **Start from Scratch** to start a blank game world.

4. Follow the prompts onscreen and click on the highlighted parts of the menus when asked.
5. Click on and select **Prop mode**.

6. Click on the **Prop mode** arrow and select **Edit**.

7. Click on the **male character** standing in the world, and then choose the **Gears** icon to see options.
8. Select **Delete** from the menu, this will remove the character from the game world entirely.
9. Click on the **up arrow** and open the **Prop Gallery**.

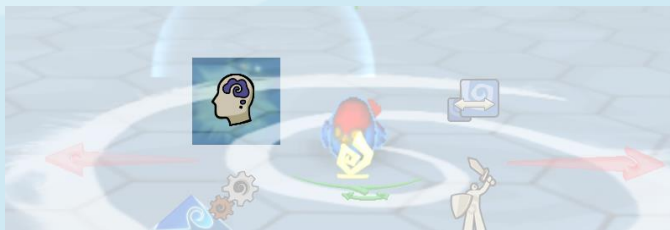

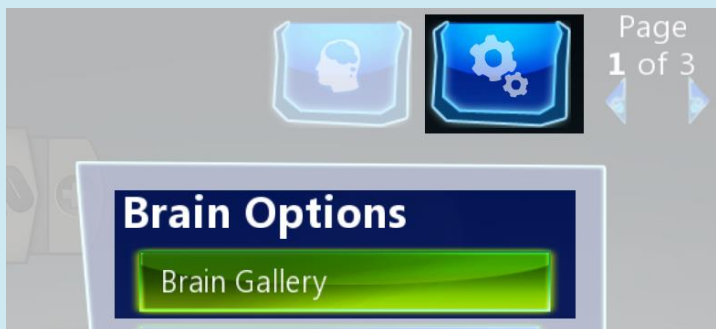

10. Click on the Characters gallery to see your options for main characters.

11. Select any character you like, and then click to place it in the world.
12. Open that character's Brain.

13. Delete all previous lines of code in the Brain – we'll add the right code that lets you control the character.
14. Click on the Gears icon at the top of the screen, and then click on the Brain Gallery button.

15. Select a 3rd person Brain that looks interesting – all the necessary code will automatically populate the empty Brain.
16. Test your new main character!

Congratulations! Now you can change your main character to whatever you want!
