

CoderDojo - Call for Translators!—

What is CoderDojo?

A volunteer led movement of free of charge coding, programming and technology clubs that provide kids and young people around the world with the opportunity to build computational programming skills. In addition to the much needed technology skills, young people enjoy the opportunity of being involved in a highly social community and experience a fun, collaborative and energetic learning environment. Young people also build complementary skills of creativity, innovation, communication, collaboration, teamwork and leadership.

We need your help to translate Zen, the CoderDojo community Platform to help make it accessible for community volunteers all around the world!

Whats the ultimate aim of the movement?

The purpose of CoderDojo is to reach and engage young people from all over the world so they become creators in a meaningful, creative and social way. Our ultimate vision is a world where every single child and young person has the opportunity to learn how to code and be successful in a safe and social environment.

What is Zen?

Zen is a custom built open sourced platform for the global CoderDojo community to use to manage their Dojos and connect to volunteers around the world! They can create a listing for their Dojo, manage their members, connect through forums, award badges and issue tickets for events!

How to help translate?

We are using Crowdin to help us translate Zen to make it accessible to all community members! How to get started:

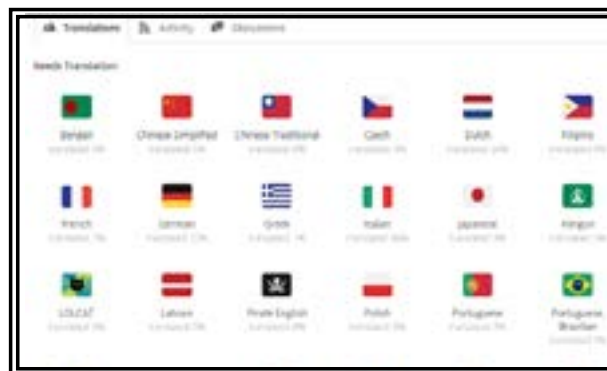

- Create an account on Crowdin [here>>](#).

- Go to the Zen page on Crowdin [here>>](#).

- Pick a flag for your chosen language.

- Get translating!

Note: Initially the main priority for translation is the 'message.po' file. The rest of the files in the project are email templates.

Thank you for volunteering to help with this!
